RE: STATEMENT OF JUSTIFICATION FOR 3130 LANGSTON BOULEVARD
PROPERTY: 3130 LANGSTON BOULEVARD (RPC #15-012-041)
OWNER/APPLICANT: RP LANGSTON I LLC

Dear Ms. Vonhm:

This firm represents RP Langston I LLC (the "Applicant"), an affiliate of Rooney Properties, LLC and title owner of the property located at 3130 Langston Boulevard in Arlington, Virginia (RPC #15-012-041) (the "Property"). On behalf of the Applicant, please accept this letter as a statement of justification for an application to amend the Property's General Land Use Plan ("GLUP") designation, a rezoning, and a new Administrative Regulation 4.1 site plan (collectively, the "Application").

The Property

The Property consists of a 73,254 square feet (1.68 acres) parcel located near the intersection of Langston Boulevard and North Kirkwood Road. It is improved with a single-story commercial building constructed in 1998, which currently operates as a drive-through Walgreens Pharmacy.

The Property is designated for Service Commercial and Public uses in the GLUP and is located within the boundaries of the Langston Boulevard Area Plan (the "Plan"). Within the Plan, the Property is located in Area 5 (West). The Property is currently zoned to the "C-2" Service Commercial-Community Business Zoning District. The Property is not subject to an existing site plan.

The Proposed Project

The Applicant proposes to redevelop the Property with a new mixed-use residential building with ground floor retail. The proposed twelve-story building will have a height of up to 136 feet at its highest point. It will provide approximately 276 residential units to accommodate

the County's growing housing demand, as well as 5,320 square feet of retail GFA to serve the community and 7,292 square feet of retail equivalent building amenities. The retail area and the main residential entry will be located along Langston Boulevard. Above the three-story podium, the Applicant proposes a courtyard and amenities for the building's residents. The building's L-shaped tower—which engages the Langston Boulevard and I-66 frontages—will overlook the courtyard, providing an attractive view for the residents.

Approximately 331 parking spaces for the proposed building will be provided onsite in a multi-level garage. The garage entrance, along with the building's service areas (such as trash and loading) will be located along the North Kirkwood Road frontage. This placement shields such areas from view and minimizes disruptions along Langston Boulevard.

The proposed development also includes significant site improvements, including but not limited to street and sidewalk improvements along Langston Boulevard and North Kirkwood Road, stormwater planters, a green roof, and a multi-use pathway fronting the site on Langston Boulevard. Further, the proposed development will include a new public space and dog run of approximately 5,000 square feet, as envisioned in the Plan.

The GLUP Amendment, Rezoning, and Site Plan

To facilitate the Property's redevelopment, the Applicant proposes to amend the Property's GLUP designation to "Medium" Office-Apartment-Hotel, rezone the Property to the "C-O-2.5" Mixed Use Zoning District, and create a new site plan for the Property. The Plan acknowledges that the Property's current GLUP designation reflects land use policies envisioned in the mid-1960s and that, to redevelop the Property in accordance with the Plan, its GLUP designation must change to "Medium" Office-Apartment-Hotel. The C-O-2.5 Zoning District implements the "Medium" Office-Apartment Hotel GLUP designation, allowing development consistent with that designation's density.

In addition to the GLUP amendment, rezoning, and new site plan, the Applicant proposes modifications for bonus density, density exclusions, loading, compact parking ratio, and other modifications as may be necessary to support the proposed development. The Applicant proposes to achieve bonus density in consideration of a community benefits package to be developed in coordination with Arlington County staff.

The Applicant's redevelopment proposal is consistent with the Plan recommendations that the Property be developed with a commercial, multi-family residential, or mixed-use building with ground floor retail along Langston Boulevard. The proposed development will help transform Langston Boulevard into a main street with taller buildings concentrated around an activity hub—the Spout Run Parkway Activity Hub—where mixed uses support a walkable

environment. It will also contribute to the Plan's vision for a diverse mix of parks, plazas, and other natural areas that balance community needs with environmental goals such as providing overland relief and public open space.

Thank you for your attention to this request. Please do not hesitate to contact me at zgwilliams@venable.com or at 202-344-4369 if you require additional information related to this Application.

Sincerely,

Zachary G. Williams

Re: Consent and Authorization Letter – Administrative Regulation 4.1 Site Plan Application and Concept Plan Application, Rezoning, GLUP Amendment
Property: 3130 Langston Boulevard (RPC # 15-012-041) (the "Property")

Dear Ms. Vonhm:

The undersigned is the title owner of the above-referenced Property. The purpose of this letter is to consent to the filing of a new Administrative Regulation 4.1 Site Plan Application and Concept Plan Application for the Property, including any related applications such as (but not strictly limited to) a Rezoning Application, GLUP Amendment, Major Site Plan Amendment Applications, Minor Site Plan Amendment Applications, Administrative Change Applications, Vacations, and Encroachments.

We hereby authorize Venable LLP to act as attorneys on our behalf in connection with the Administrative Regulation 4.1 Site Plan Application and any related application(s) described herein. Please direct all correspondence relating to the application(s) to Zachary G. Williams at Venable LLP. The boundaries of the application(s) include the undersigned's land.

Land Use

Land Use Designation*	Range of Density/Typical Use	Zoning**
Residential		
Low	1-10 units per acre, including one-family dwellings, accessory dwellings, and expanded housing option uses	R-20, R-10, R-10T, R-8, R-6, R-5
Low	11-15 units per acre	R2-7, R15-30T
Low-Medium	16-36 units per acre	R15-30T, RA14-26, RA8-18
Medium	Up to 37-72 units per acre	RA7-16, RA6-15, RA-H
High-Medium	Up to 3.24 F.A.R. *(Floor Area Ratio)* Residential	RA-4.8
High	Up to 4.8 F.A.R. Residential Up to 3.8 F.A.R. Hotel	RA-H-3.2, C-O Rosslyn
Commercial and Industrial		
Service Commercial	Personal and business services. Generally one to four stories, with special provisions within the Columbia Pike Special Revitalization District.	C-1-R, C-1, C-1-O, C-2, C-O-1.0, C-TH
Service Industry	Wholesale, storage, and light manufacturing uses, including those relating to building construction activity.	CM, M-1, M-2
Public and Semi-Public		
Public	Parks *(Local, regional, and federal)*. Schools *(public)*. Parkways, major unpaved rights-of-way. Libraries and cultural facilities.	S-3A, S-D
Semi-Public	Country clubs and semi-public recreational facilities. Churches, private schools and private cemeteries *(predominant use on block)*.	S-3A, S-D
Government and Community Facilities	County, state and federal administration and service facilities *(police, fire, property yard, etc.)* Hospitals, nursing homes, and institutional housing. Utilities, military reservations, airports, etc.	P-S, S-D, S-3A

Office-Apartment-Hotel	Office Density	Apartment Density	Hotel Density	
Low	Up to 1.5 F.A.R.	Up to 72 units/acre	Up to 110 units/acre	C-O-1.5, C-O-1.0
Medium	Up to 2.5 F.A.R.	Up to 115 units/acre	Up to 180 units/acre	C-O-2.5
High	Up to 3.8 F.A.R.	Up to 4.8 F.A.R.	Up to 3.8 F.A.R.	C-O, C-O Crystal City, C-O Rosslyn, RA-H-3.2

Mixed Use		
Medium Density Mixed-Use	Up to 3.0 F.A.R. with special provision for additional density within the "Clarendon Revitalization District" (See Note 12) and the "Special Coordinated Mixed Use District" for East End of Virginia Square (See Note 3)	C-R, C-3, MU-VS
High-Medium Residential Mixed-Use	Up to 3.24 F.A.R. including associated office and retail activities.	R-C
Coordinated Mixed-Use Development	This is a high density mixed-use district with actual density determined by site size. Up to 6.0 F.A.R. with office not more than 3.0 F.A.R.	C-O-A

✻ Each land use designation on the GLUP map indicates a range of densities and typical uses for that general location. An approval by the County Board of a development proposal anywhere within this range would be consistent with the County's goals and vision. The higher end of that density range may not necessarily represent the vision for a specific location. When a development proposal substantially complies with County goals, policies and plans, and is consistent with good zoning practice, and/or assists in achieving the objectives identified in Section 15.5.9 of the Zoning Ordinance, the County Board may approve that development proposal at the higher end of that density range or within or above the density ranges identified on the GLUP map, as provided by the Zoning Ordinance. Where a mix is shown, the width of the stripe indicates percentage of use. The GLUP booklet provides additional information of land use designation striping.

✻✻ The zoning districts which are listed next to each General Land Use Plan designation are those which typically correspond to that specific land use plan designation. However, there may be instances where other zoning categories may apply or cases in which the listed zoning categories are not appropriate, since the determination of an appropriate zoning district for a particular site depends upon factors other than simply the General Land Use Plan designation. This list is provided as a guide only. If an area is shown "Public" but is not publicly owned (not crosshatched) the existing zoning of the property and surrounding land uses should determine the development potential of the site.

Notes

1. This area was designated the "Crystal City Coordinated Redevelopment District" on 9/28/10, to permit heights and densities called for in the Crystal City Sector Plan where Sector Plan goals are otherwise generally met.
2. This area was designated the Western Rosslyn Coordinated Redevelopment District on 2/20/16.
3. This area shall be part of a "Special Coordinated Mixed-Use District" (East Clarendon, 7/13/82), (George Mason University/Virginia Square Shopping Center, 8/7/82), (East End of Virginia Square, 6/14/03). The "Special Coordinated Mixed-Use District" designation was established for larger sites where redevelopment may result in significant changes within a Metro Station Area.

   Development of the East Clarendon district bordered by Wilson Boulevard, North Danville Street, 11th Street North, and North Fillmore Street shall be consistent with the concept plan and design guidelines included in the East Clarendon: Special Coordinated Mixed Use District Plan adopted by the County Board on 9/20/94.

   In the George Mason University/Virginia Square Shopping Center district, the area designated "High" Office Apartment Hotel allows a base F.A.R. of 3.0 Office/Hotel; and up to a total of 4.3 F.A.R. in consideration of residential development, community services and cultural facilities (7/11/83). The area bordered by N. Monroe Street, N. Lincoln Street, Washington Boulevard, Kirkwood Road, and Fairfax Drive and designated "Public" is intended to accommodate existing facilities and future expansion of the George Mason University Arlington campus (7/28/01).

   For the East End district of Virginia Square, designated as "Medium Density Mixed-Use" and bordered by Fairfax Drive, Wilson Boulevard, North Lincoln Street, and the intersection of 10th Street North/Wilson Boulevard/Fairfax Drive, shall be developed consistent with the Virginia Square Sector Plan adopted by the County Board on 12/7/02 and any adopted amendments thereto. Allow density up to 3.24 F.A.R. for properties east of North Kansas Street and up to 4.0 F.A.R. for properties west of North Kansas Street.
4. This area was designated the "Pentagon City Coordinated Redevelopment District" on 2/12/22, to permit heights and densities called for in the Pentagon City Sector Plan where Sector Plan goals are otherwise generally met.
5. This area was designated a "Coordinated Preservation and Development District" on 4/23/77.
6. This area is subject to further planning guidance in the Shirlington Special GLUP Study Plus and Concept Plan, adopted by the County Board on July 18, 2020.
7. On 4/16/11, this area was designated as the "East Falls Church Neighborhood Center District."
8. These areas were designated as "Special Revitalization District": *(continued)*
8. *(continued)* Columbia Pike on 11/15/86 and amended on 12/17/02, 2/25/03 and 12/15/07, Langston Boulevard (formerly Lee Highway)/Cherrydale on 4/1/95 and amended on 12/16/23.
9. This area was designated as the "Langston Boulevard Planning District" on 11/11/23. The MTP indicates areas planned for new streets throughout the district.
10. Notes 10 and 11 were removed in the 2019 GLUP Reprint to eliminate explanations already provided elsewhere on the map. The Note numbers have been reserved for future use.
11. Notes 10 and 11 were removed in the 2019 GLUP Reprint to eliminate explanations already provided elsewhere on the map. The Note numbers have been reserved for future use.
12. This area was designated the "Clarendon Revitalization District" on 7/7/90. The boundary for this district was amended on 2/25/06 and 12/9/06. The goals and objectives for this area are set forth in the "Clarendon Revitalization District" located in the GLUP Booklet.
13. These areas were designated a "Special Affordable Housing Protection District": Pollard Gardens/Clarendon Courts on 11/17/90; Twin Oaks on 5/24/00; The Odyssey on 11/20/01; Liberty Center on 1/26/02; WRIT Rosslyn Center on 7/20/02; North Monroe Street Residential on 10/18/03; North Troy Street Residential on 2/21/04; Rosslyn Ridge on 7/10/04; Rosslyn Commons on 6/17/08; and 1501 Arlington Boulevard on 4/23/19.
14. This area was designated as the "North Quincy Street Coordinated Mixed-Use District" on 2/4/95, and amended on 2/23/13.
15. This area was designated as the "Rosslyn Coordinated Redevelopment District" on 5/11/96 and revised on 2/20/16.
16. This area has been designated a "Coordinated Multiple-Family Conservation and Development District" on 1/2/99. In order to achieve affordable housing goals without unduly impacting adjacent areas designated "Low" Residential (11 - 15 units per acre) and "Low-Medium" Residential (16-36 units per acre), development on this site shall not exceed 48 units per acre.
17. This area was designated as the "Radnor Heights East Special District" on 12/14/99.
18. The County Board has designated this area as eligible for an additional gross floor area of up to 1.161 million square feet over and above the base density of the site, which may be granted upon fee conveyance to the County of a sufficient amount of property, as determined by the County Board, for parks, open space, and community recreation use, in accordance with Section 15.5.7 of the Zoning Ordinance. The total base and additional densities shall include a minimum of 1/3 for residential use, including hotel, and a maximum of 2/3 for office and commercial uses.
19. Affordable Housing requirements for site plan projects were adopted by the County Board on 12/10/05 for residential and commercial site plan projects within and outside the Metro Corridors as identified on the General Land Use Plan. These provisions are contained in Section 15.5.8 and 15.5.9 of the Zoning Ordinance.
20. This area was designated as the "North Tract Special Planning District" on 4/24/04. In accordance with a revised agreement, dated 9/29/10, between the County and MR Monument View LLC, providing for the exchange of certain property owned by the County and property owned by MR Monument View LLC known as the Twin Bridges site, the County Board, pursuant to Section 15.5.7 of the Zoning Ordinance, and in order to facilitate the implementation of the North Tract Master Plan for Park and Recreational Facilities, has designated the property owned by the County and to be transferred to MR Monument View LLC as eligible for up to 145,797 square feet of additional development density over and above its base density.
21. This area was designated the Green Valley Village Center (formerly Nauck) Special Revitalization District on 7/10/04.
22. This area was designated the Fort Myer Heights North Special District on 4/16/05.
23. Within the area shown as "Medium" Office-Apartment-Hotel, in order to provide an appropriate transition to adjacent residential neighborhoods, buildings on the southwest and western portions of the site shall consist of residential uses and have maximum heights of 50 feet.
24. These areas were designated a "Special Revitalization District" on 11/16/13 and include Conservation Areas (#24a).
25. Adopted on 2/24/18 as additional guidance for this area, development along the south side of 11th Street North between North Vermont and North Randolph Streets should complete and reinforce the overall transition envisioned by the Ballston Sector Plan from Fairfax Drive to 11th Street by:
    - Limiting building heights along 11th Street to 3 to 4 stories for the first 80 feet of block depth; and
    - Encouraging sufficient separation between buildings on adjacent sites.
26. This area was designated the "Courthouse Square Special District" on 10/21/17.
27. This area is subject to further planning guidance as provided in the "Washington Boulevard and Kirkwood Road Special GLUP Study and Concept Plan," adopted by the County Board on 11/18/17.
28. These areas were designated as a "Housing Conservation District" on 12/16/17 and amended on 11/11/23 following the adoption of the "Langston Boulevard Planning District".

FRONT

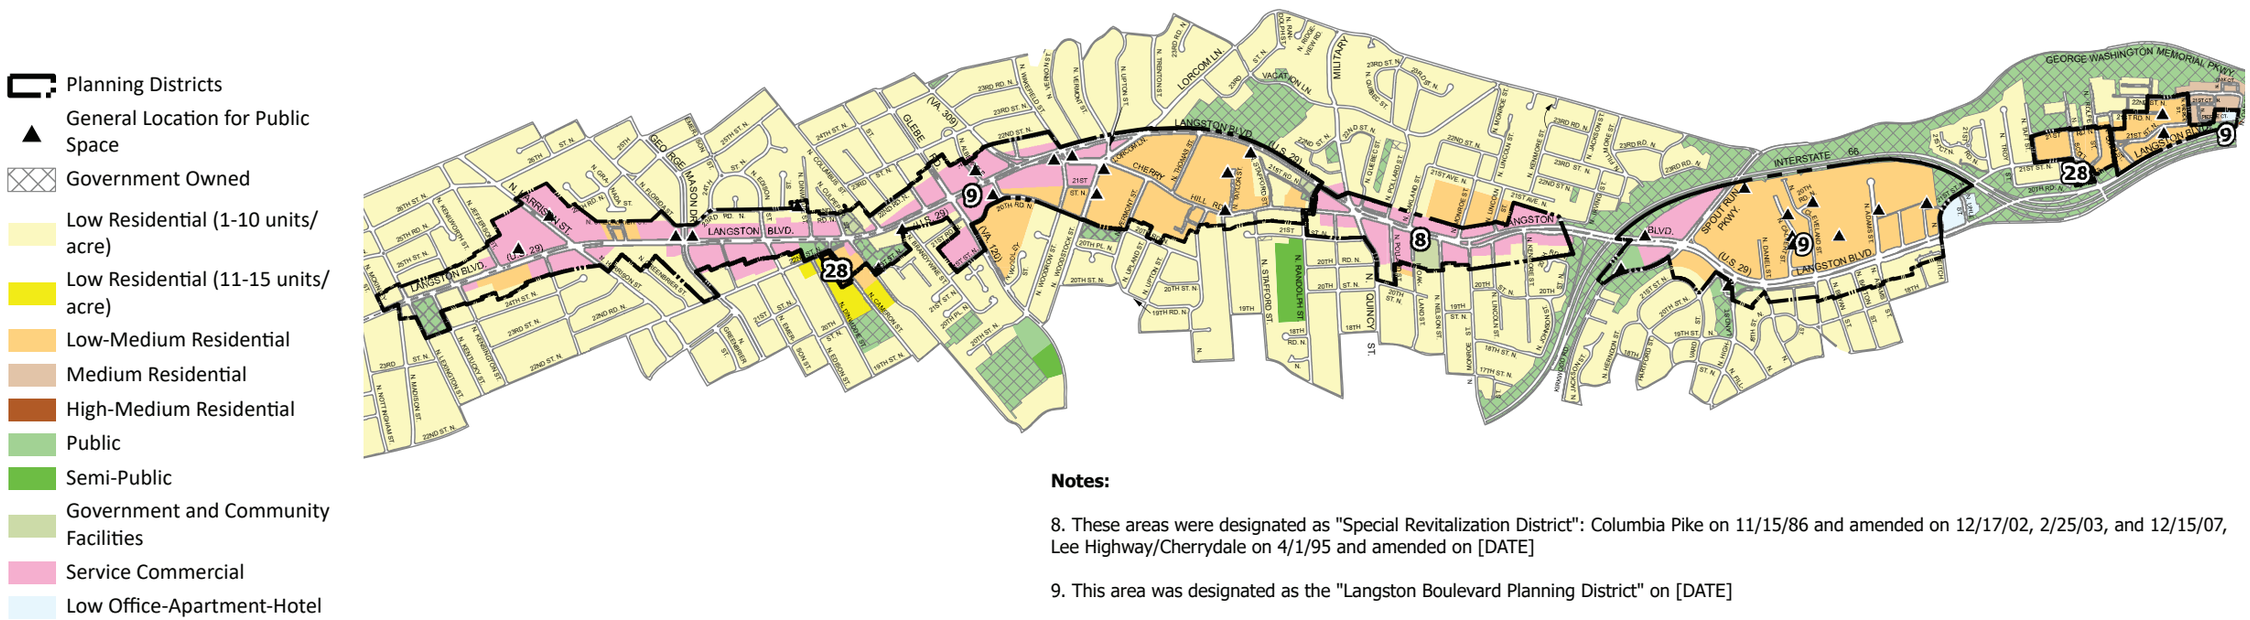
5.2 GLUP and Zoning Ordinance Amendments

GLUP amendments, MTP amendments, and Zoning Ordinance amendments are recommended to facilitate reinvestment per the Plan goals.

5.2.1 GLUP Amendments

The GLUP expresses the County's vision for future land use and development and provides guidance that reinforces and ensures that development patterns within the County are compatible in terms of uses and densities. The existing GLUP designations in the Langston Boulevard Planning Area reflect land use policies originally envisioned when the Comprehensive Plan was adopted in the mid-1960s. The Langston Boulevard Plan recommends Plan goals that are not reflected in the current GLUP, as well as land uses and building heights that are inconsistent with the existing GLUP designations on sites located within Core Study Area.

To implement the Langston Boulevard vision expressed in the Plan, several amendments to the GLUP Map and Booklet are therefore proposed with Plan adoption. Intended to communicate that a new planning vision has been adopted for the Langston Boulevard corridor, initial GLUP amendments proposed with Plan adoption include the establishment of the Langston Boulevard Planning District and larger Planning Corridor, addition of open space triangles, and removal of HCD areas. Proposed amendments also include removal of parcels within the Cherrydale Revitalization District adjacent to areas where redevelopment has already occurred per Cherrydale Plan goals, as proposed with adoption of new policy and regulations for Expanded Housing Options.



Notes:

8. These areas were designated as "Special Revitalization District": Columbia Pike on 11/15/86 and amended on 12/17/02, 2/25/03, and 12/15/07, Lee Highway/Cherrydale on 4/1/95 and amended on [DATE]

9. This area was designated as the "Langston Boulevard Planning District" on [DATE]

28. These areas were designated as a "Housing Conservation District" on 12/16/17

Figure 5.01: Future Glup Map - Planning Study Area

In addition to the GLUP Map and booklet amendments proposed with Plan adoption, amendments to land use designations are also appropriate. The Draft Langston Boulevard Plan recommends land uses and building heights that are inconsistent with existing GLUP designations on many sites located within the Core Area. Thus, amendments for the Residential District, Mixed-Use District, and Activity Hubs would align the GLUP with Plan goals and policies. These amendments to GLUP designations may correspond with existing zoning district regulations for special exception development and would support rezoning requests to facilitate special exception private development applications.

A future GLUP map indicates the amendments requested with Plan adoption, as noted above, as well as the appropriate GLUP designations that private property owners should request with applications for redevelopment.

LIST OF APPENDICES

3130 LANGSTON BOULEVARD

SECTION 1
INTRODUCTION

This report presents the results of a Multimodal Transportation Assessment (MMTA) for the proposed redevelopment of 3130 Langston Boulevard in Arlington County, Virginia. This MMTA was completed in support of the proposed rezoning and 4.1 Site Plan application. As shown in Figure 1-1, the site is bounded by Langston Boulevard to the north, N. Kirkwood Road to the south, and the 3100 Langston Boulevard development to the east in Arlington County, Virginia.

The site comprises one parcel, identified as Arlington County RPC #15-012-041, and is approximately 1.68 acres. The site is improved with a single-story brick building, currently occupied by a Walgreens pharmacy with a drive-through and associated surface parking.

The site is zoned to the C-2 Service Commercial-Community Business zoning district pursuant to §§ 7.17 et seq., respectively, of the Arlington County Zoning Ordinance (the "Zoning Ordinance").

As proposed, the site would be rezoned with a General Land Use Plan (GLUP) amendment and redeveloped in accordance with the Langston Boulevard Plan. The existing building and surface parking would be razed and redeveloped with a mixed-use multifamily residential building with approximately 276 units and space for ground floor retail and/or equivalent. The site would be served by approximately 331 parking spaces and two loading spaces.

Access to the site is currently provided by one (1) driveway along Langston Boulevard, and two (2) driveways along N. Kirkwood Road. As proposed, access would be consolidated to one (1) driveway. The driveway on Langston Boulevard would be closed and the two (2) driveways on N. Kirkwood Road would be consolidated to a single access point. For reference the site plan is shown on Figure 1-2.

Study Scope

A scoping meeting was held with Arlington County staff on May 24, 2024, and identified four (4) study intersections for inclusion in the MMTA. The approved scoping document identified the parameters of the MMTA and is included in Appendix A for reference. For purposes of this study, the buildout year is assumed to be 2028.

Tasks undertaken in this study include the following:

1. Reviewed proposed development plans, recently completed traffic impact studies in the vicinity, the Langston Boulevard Plan, and other background data.

2. Completed a field reconnaissance of existing roadway and intersection geometries, traffic controls, speed limits, and adjacent on-street parking restrictions.

3. Conducted a comprehensive multimodal analysis of the site and the study area including transit, walkability, and bicycle facilities. The study identifies what options, other than vehicular, are available to all users of the site. The study includes bus ridership information, metro ridership information, bike-sharing facilities, and pedestrian infrastructure inventory.

4. Established a study scope and specific analysis parameters for the MMTA with Arlington County Department of Environmental Services (DES) staff (see Appendix A).

5. Collected vehicular, pedestrian, and bicycle counts at the study intersections during the weekday AM and PM peak hours.

6. Requested boarding and alighting information for adjacent bus stops serving the study area from WMATA and Arlington County.

7. Reviewed and summarized VDOT's crash data for the study area.

8. Conducted operational analyses of existing levels of service (LOS) and vehicle queues (average and 95th percentile) at the study intersections based on the existing peak hour traffic volumes, the existing intersection geometries and traffic controls.

9. Forecasted future peak hour traffic volumes for the year 2028 without the proposed development based on existing traffic volumes with the addition of regional traffic growth. No pipeline developments were identified during the scoping meeting.

10. Analyzed 2028 future LOS and queues without the proposed development at the study intersections based on the future forecasts without development, the future intersection geometries, and traffic controls.

11. Estimated the number of peak hour vehicular trips and person trips that would be generated by the buildout of the proposed development based on standard Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition rates and equations and County mode share information.

12. Forecasted future peak hour traffic volumes for the year 2028 with the proposed development based on background traffic volumes and traffic associated with the proposed development.

13. Analyzed year 2028 future peak hour LOS and vehicle queues with the proposed development at the study intersections and site driveway, based on the future traffic forecasts and future intersection geometries and traffic controls.

14. Identified traffic improvements / enhancements necessary to mitigate future forecasts as a result of the proposed development for 2028 conditions, if required.

SECTION 2
BACKGROUND INFORMATION

Existing Transportation Facilities

Roadway Network. Vehicular access to/from the existing site is provided via one (1) driveway along Langston Boulevard, and two (2) driveways along N. Kirkwood Road. Regional access to/from the site is provided via Interstate 66 to the east, Spout Run Parkway to the northwest, and Langston Boulevard to the north.

Existing lane use and traffic controls at the study intersections are shown on Figure 2-1. A description of each roadway in the vicinity of the site is provided below:

Langston Boulevard (US-29) is classified as a Principal Arterial with a posted speed limit of 35 mph. Langston Boulevard serves as a major east-west connection through Arlington County between Leesburg Pike (Route 7) in Falls Church and the Key Bridge in Washington D.C. Langston Boulevard in the vicinity of the site carries approximately 26,000 vehicles per day (VPD).

Kirkwood Road is classified as a Minor Arterial with a posted speed limit of 25 mph. Kirkwood Road serves as a minor north-south connection through Arlington County from Washington Boulevard near Virginia Square, past Lyon Village, and ending at Langston Boulevard (US-29). Kirkwood Road in the vicinity of the site carries approximately 7,000 VPD.

Spout Run Parkway is classified as a Minor Arterial with a posted speed limit of 40 mph. Spout run serves as a major east-west connection through Arlington County between the George Washington Memorial Parkway, past Interstate 66, and ending at Langston Boulevard (US-29) and Kirkwood Road. Spout Run Parkway in the vicinity of the site carries approximately 15,000 VPD.

Interstate 66 is classified as an Interstate with a posted speed limit of 55 mph. I-66 serves as a major east-west connection through Arlington County, ending on the Theodore Roosevelt Bridge. The off-ramp of Interstate 66 in the vicinity of the site carries approximately 7,000 VPD.

For reference, the existing and proposed cross section for the Langston Boulevard and N. Kirkwood Road are shown on Figures 2-2 and 2-3, respectively.

General Land Use Plan (GLUP)

The entire Property is planned for Service Commercial and Public uses on the General Land Use Plan ("GLUP"). The "Service Commercial" designation recommends personal and business services from one to four stories as well as a series of zoning districts, including the C-2 and C-O-1.0 zoning districts. The "Public" designation includes land used for parks (local, regional, and federal), public schools, libraries, and cultural facilities. This use includes the S-3A and S-D zoning districts.

The Property is located within the boundary of Area 5 (West) of Arlington County's Langston Boulevard Area Plan. As proposed, the site would be rezoned with a GLUP amendment and be redeveloped in accordance with the Langston Boulevard Plan.

Figure 2-2 shows the GLUP map within the vicinity of the site.

Langston Boulevard Area Plan

The site is located within Area 5 (West) of Arlington County's Langston Boulevard Area Plan, a Comprehensive Plan with the goal of improving the safety, comfort, and convenience of the Langston Boulevard Corridor. The Plan's transportation goals focus on providing access to a wider variety of multimodal transportation options with the intent of transforming Langston Boulevard into a more sustainable transportation zone and minimizing the use of cars. Through this Plan, some Arlington County General Land Use Plan policies were amended to allow for further residential development along the Langston Boulevard Corridor, including this site. The Langston Boulevard Corridor, with direct and multimodal access to Washington, D.C., presents a prime opportunity to provide residents and commuters with a safe and convenient approach to sustainable development. Transportation elements of the Plan include the simplification of intersections, the facilitation of a multimodal corridor for commuters, the reallocation of roadway space for pedestrians and bicyclists, as well as providing access to improved pedestrian facilities and greenspaces.

Due to the travel speeds of Langston Boulevard in the vicinity of the site, as well as the limited facilities for pedestrians and bicyclists on the sidewalks and the nearby Custis Trail, the Langston Boulevard Area Plan calls for a number of multimodal improvements to be added to the area. In the area of the Langston Boulevard / Spout Run / North Kirkwood intersection, a Greenway will be established to benefit pedestrians and users of the Custis Trail. According to the Plan, there is sufficient space along Langston Boulevard to provide enhanced bike lanes without the need for redevelopment with the possible conversion vehicular travel lanes, which will require coordination with VDOT. Additionally, developments in this area should include improvements such as bicycle and improved lighting facilities, as well as public art. Along the western edge of Spout Run and Kirkwood Road to the north and south of Langston Boulevard, a Greenway / overland relief area should be made available.

VDOT Crash Data

Crash data was downloaded from VDOT's Crash Data Map webpage for the past three (3) years for the study area along Langston Boulevard. This data is summarized below. Based on the available data, a total of 32 crashes occurred within the study area from January 2022 through April 2024. The detailed information is included in Appendix C for reference.

The types and number of crashes during the study period is as follows:

- Rear End: 5 Crashes (16%)
- Angle: 24 Crashes (75%)
- Pedestrians: 0 Crashes (0%)
- Fixed Object : 0 Crashes (0%)
- Sideswipe: 1 Crashes (3%)
- Head-On: 2 Crashes (6%)

The year with the highest number of crashes is 2023 with 16 crashes in the vicinity of the site. As shown above, the most common type of crash found in the study are angled crashes, accounting for 75% of the reported incidents. The least common type of crash are sideswipe collisions, accounting for only 3%. From all these crashes, no fatalities were reported; with 18 reported injuries. Most of these crashes occurred at the signalized intersections. Of the 32 crashes, six (6) occurred in the vicinity of the site driveway on Langston Boulevard, four (4) of which were angled collisions, and one (1) was a sideswipe collision. Some of these crashes were accessing the retail site to the north.

SECTION 3
MULTIMODAL TRANSPORTATION FACILITIES

Overview

The subject site is served by multiple public transportation options including regional bus service; the Washington Metropolitan Area Transit Authority (WMATA) Metrorail system; a connected network of sidewalks and pedestrian crosswalks; bike-sharing systems; and on-street and trail bicycle facilities. The site is located within the Lyon Village neighborhood, with the Cherrydale neighborhood located just to the west and the Maywood Village to the north. The neighborhoods are primarily developed with retail/service uses along the Langston Boulevard frontage and residential neighborhoods behind.

Census Data Mode-Share Information

U.S Census data for "Means of Transportation to Work by Vehicles Available" based on the 2021 and 2021 American Community Survey 5-year estimates for Census Tracts surrounding the site were analyzed to understand travel patterns exhibited by local residents. A total of six (6) census tracts were selected due to their proximity to the site. They include Census Tracts 1005, 1006, 1014.02, 1014.06, 1015, 1015.02, and 1015.03. The survey results of the selected census tracts indicate that approximately 38% of commuters travel by vehicle, 3% carpooled, 25% by public transportation, 6% walk, 4% bike/other, 24% work from home. Refer to Appendix B for a map with the identified census tracts as well as detailed census mode-share information.

Existing Transit Services

Metrorail Service. The closest Metrorail Stations, Court House and Clarendon to the south, are located approximately one (1) mile from the subject site. The Court House and Clarendon Metrorail Stations provide access to the Orange and Silver lines. The Orange Line runs between New Carrolton and Vienna. The Silver Line runs between Largo Town Center and Ashburn Metrorail Station. Riders can take any of these lines to Metro Center and L'Enfant Plaza for access to other metro lines.

Figure 3-1 analyzes the 15-minute and 30-minute transit shed centered around the vicinity of the Langston Boulevard site. As shown on the graphic, most of Arlington County, parts of Falls Church, as well as much of Downtown D.C. are accessible via transit options within 30 minutes of the site. Some areas of interest within the highlighted zones include a variety of retail and residential areas, and Metro stations served by all Metro lines.

The WMATA Metrorail system operates seven (7) days a week from 5:00 AM to 11:30 PM Monday through Thursday, 5:00 AM to 1:00 AM on Fridays, 7:00 AM to 1:00 AM on Saturdays and 8 AM to 11:00 PM on Sundays. The train headways at the Ballston-MU and Pentagon City Metrorail Station range from eight (8) minutes during peak periods to 12-20 minutes during off-peak periods and weekends.

Bus Service. The site and nearby area is served by two (2) bus routes operated by Arlington Rapid Transit (ART) and WMATA. Below are summaries of the routes that operate near the site.

WMATA Metro Bus 3Y (Langston Boulevard – McPherson Square Line). This route runs across Arlington, starting from the East Falls Church Metro Station on S. Sycamore Street, and down Langston Boulevard (US-29), ending across the Theodore Roosevelt Bridge in D.C. near the Metro Center Metro Station. The bus line operates on weekdays with approximately 8-minute headways during peak periods.

ART Bus 55 (East Falls Church – Langston Blvd – Rosslyn). This route runs across Arlington, starting from the East Falls Church Metro Station on S. Sycamore Street, and down Langston Boulevard (US-29), ending near the Rosslyn Metro Station on N. Moore Street. The bus line operates on weekdays, Saturdays, and Sundays with 7-minute headways during peak periods.

Refer to Figure 3-2 for the locations of bus stops near the site and Figure 3-3 for bus routes. Specific information for the above-listed routes is in Appendix B. Average weekday boarding and alighting data was requested from Arlington County and WMATA for the nearby bus stops. However, no data was provided.

Pedestrian Facilities. A majority of the streets in the vicinity area provide sidewalks on both sides of the street and marked crosswalks at signalized intersections. Two (2) of the site frontages include sidewalks, the frontage facing Langston Boulevard (US-29) to the north, and the frontage facing N. Kirkwood Drive to the east and southeast. Below provides a summary of the pedestrian infrastructure in place at each of the study signalized intersections.

1. Langston Boulevard / I-66 WB On-Ramp: The signalized intersection of Langston Boulevard and the I-66 WB On-Ramp has marked crosswalks, pedestrian countdown heads, and ramps serving two (2) legs of the intersection.

2. Langston Boulevard / I-66 EB Off-Ramp: The signalized intersection of Langston Boulevard and the I-66 EB Off-Ramp has marked crosswalks, pedestrian countdown heads, and ramps serving two (2) legs of the intersection.

3. Langston Boulevard / N. Site Drive / CVS Drive: The un-signalized intersection of Langston Boulevard / N. Site Drive / CVS Drive has no marked crosswalks, pedestrian countdown heads, or ramps serving any legs of the intersection.

4. Langston Boulevard / N. Kirkwood Road: The signalized intersection of Langston Boulevard and N. Kirkwood Road has marked crosswalks, pedestrian countdown heads, and ramps serving four (4) legs of the intersection.

5. N. Kirkwood Road / E. Site Drive: The unsignalized intersection of N. Kirkwood Road and the E. Site Drive has no marked crosswalks, pedestrian countdown heads, or ramps serving any leg of the intersection.

6. N. Kirkwood Road / S. East Site Drive: The unsignalized intersection of N. Kirkwood Road and the S. East Site Drive has no marked crosswalks, pedestrian countdown heads, or ramps serving any leg of the intersection.

Figure 3-4 shows the pedestrian facilities within the vicinity of the site.

In order to provide an assessment of the site's access to pedestrian facilities and nearby amenities, the Walk Score was calculated for the site is included in Appendix B. The Walk Score is an analysis provided by the website and provides scores from 0 (worst) to 100 (best) for walkability. Based on its location, the subject site received a score of 82 which is classified as "Very Walkable – Most errands can be accomplished on foot." Further, walk score provides a transit score of 56 which is classified as "Good Transit – Many nearby public transportation options" and a bike score of 65 implying that the site is "bikeable". It is to be noted that Langston Boulevard has no dedicated bike lanes in the vicinity of the site, and the latest 2022 Arlington County Bike Map categorizes Langston Boulevard as a "Challenging" bike route. However, other bike trails and bike routes exist in the vicinity of the site.

The combination of sidewalks marked crosswalks at the intersections around the site, installation of ramps to serve the crosswalks, and planting buffers enhance the pedestrian experience around the site and encourage alternative modes of transportation. The site's proximity to the Clarendon and Court House Metrorail station provides multiple transit options for future residents.

Figure 3-5 shows the 10-minute, 20-minute, and 30-minute pedestrian travel shed for the proposed development. Within a 10-minute walk, a commuter could access neighboring roads, multiple Capital Bikeshare locations, pay-as-you-go electric scooters and bicycles, and Thrifton Hills Park. Within a 20-minute walk, commuters could access a wide range of retail and residential areas, and three Metro stations served by the Silver and Orange lines. Within a 30-minute walk, commuters will have access to more retail, residential, and recreational amenities, an additional Metro station served by the Orange and Silver lines, and more Capital Bikeshare locations.

Bicycle Facilities. Marked bike lanes exist on both the northbound and southbound lanes of Kirkwood Road. According to the 2022 Arlington County Bike Map, this bike route is classified with a medium "perception of comfort". To the west and the east on Langston Boulevard are dedicated bike lanes, categorized as "Challenging" by the Arlington County Bike Map. Across Langston Boulevard, north of the site, runs the Martha Custis Trail. The Custis Trail is a 4.5-mile-long shared use path in Arlington County. This path is a part of the Arlington Loop Trail. Figure 3-6 shows the bike routes from the Arlington County Bicycle Facilities Map. As shown, the combination of on-street routes, nearby Bikeshare, and proximity to the Arlington Loop trail create a bicycle friendly environment and encourage use as a non-auto mode. Additionally, Figure 3-7 highlights the bicycle facilities existing and planned as part of the Master Transportation Plan (MTP). With the proposed developed a new 5-foot bike lane will be provided along the site's frontage as recommended in the MTP.

Figure 3-8 demonstrates the 10-minute, 20-minute, and 30-minute bicycle travel shed for the proposed development. Within a 10-minute bike ride, commuters will have access to much of Arlington, several bicycle paths, retail and residential options, and multiple Metro stations served by the Silver and Orange lines. Within a 20-minute bike ride, commuters would have access to all of Arlington, parts of Falls Church, McLean, and much of Washington D.C., and access to Metro stations served by all Metro lines. Within a 30-minute bike ride, commuters will have access to the areas of McLean and Annandale. Alexandria, access to parts of Bethesda, and most of Washington D.C.

Capital Bikeshare is an automated bicycle rental or bicycle sharing program that provides over 5,000 bicycles at 700+ stations across Washington, DC, Maryland, and Virginia. Membership, which is required to use Capital Bikeshare, includes different options for joining; from single trip ($1), 24 hours ($8), 30 days ($20), one year ($95), or one year with monthly installments ($95, $7.92/month for 12 months). The first 45 minutes of use are free; users then are charged a usage fee ($0.05) for each additional minute. Bicycles can be returned to any station with an available dock.

Within a ½ mile radius of the site there are four (4) Capital Bikeshare stations, as shown on Figure 3-4, with the closet is located just east of the site at the intersection of Langston Boulevard and N. Kirkwood Road. A total of 15 docks are available at this location.

In addition to bikeshare, electric-assist scooter sharing, and dock-less bicycles have become readily available throughout Langston Boulevard. Users must have an account with the scooter service provider and can then board a scooter wherever available. Fees per ride vary with each service provider, but typically charge a small startup fee and rate per minute. When the user is done with their trip, the scooter is left for the next rider.

SECTION 4
EXISTING CONDITIONS

Existing Traffic Counts

Existing vehicular, pedestrian, and bicycle traffic counts were conducted by National Data & Surveying Services (NDS) on Thursday, May 30, 2024, from 7:00 to 10:00 AM and 4:00 to 7:00 PM at the following study intersections:

1. Langston Boulevard and I-66 WB On-ramp
2. Langston Boulevard and I-66 EB Off-ramp
3. Langston Boulevard and N. Site Drive and CVS Drive
4. Langston Boulevard and N. Kirkwood Road
5. N. Kirkwood Road and East Site Drive
6. N. Kirkwood Road and Southeast Site Drive

The weekday AM and PM peak hour vehicular, pedestrian, and bicycle traffic counts are summarized on Figures 4-1 through 4-3, respectively. Detailed sheets containing the count data are included in Appendix C.

A review of the peak hour vehicular count data indicates that the link of Langston Boulevard, adjacent to the site, currently carries approximately 2,960 AM peak hour trips and 2,836 PM peak hour trips. The northern driveway on Langston Boulevard currently carries approximately 1 AM peak hour trips, and 7 PM peak hour trips. The western site driveway on Kirkwood Road currently carries approximately 2 AM peak hour trips and 4 PM peak hour trips while the eastern site driveway currently carries approximately 16 AM peak hour trips, and 42 PM peak hour trips.

Existing Conditions Operational Analysis

The existing peak hour LOS and queues were estimated at the study intersections based on; the existing lane use and traffic controls shown on Figure 2-1; existing traffic signal phasing/timings obtained from Arlington County; the existing vehicular, pedestrian, and bicycle traffic counts shown on Figures 4-1 through 4-3; and the Highway Capacity Manual (HCM) 2000 methodologies, using Synchro Software, version 11.

Descriptions of LOS “A” through “F” for signalized and unsignalized intersections are included in Appendix D. The results of the existing conditions analysis are presented in Appendix E and summarized in Tables 4-1 and 4-2. In addition to the peak hour vehicular, pedestrian and bike volumes the following inputs were coded into Synchro: calculated peak hour factors by approach, lane widths, speed limits, adjacent parking lane, number parking maneuvers, and bus blockages.

Levels of Service. As shown in Table 4-1 the three (3) signalized study intersections currently operate at overall acceptable LOS "C" or better during the AM and PM peak hours, with most operating at LOS "B" or "C". All lane groups operate at LOS "E" of better with the exception of the eastbound-left movement during the PM peak hour period at the intersection of Langston Boulevard / N. Kirkwood and Spout Run Parkway.

At the stop-controlled intersections, all lane groups currently operate at LOS "C" or better during the AM and PM peak hours.

Queuing. Existing peak hour queues for study intersection were determined using the 50th and 95th percentile queues estimated by Synchro Software, version 11. The 50th and 95th percentile queues of existing conditions are used to establish a datum against which to compare future conditions. The 50th percentile (or average) queue is defined as the maximum back of queue associated with a typical signal cycle. The 95th percentile queue is defined as the maximum back of queue with 95th percentile traffic volumes. The 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations[1]. The results of the queueing analysis are presented in Appendix E and summarized in Table 4-2.

As shown on Table 4-2 and observed in the field, peak hour queuing and the calculated average queues can be accommodated within a majority of available turn lane storage provided at study intersections. Vehicular queueing (95th percentile) exceeds the available storage for the southbound left (AM and PM) and eastbound left turns (PM) at the Langston Boulevard / N. Kirkwood and Spout Run Parkway intersection and the westbound left at the Langston Boulevard / I-66 (PM) on ramp as shown on Table 4-2.

SECTION 5
FUTURE CONDITIONS WITHOUT DEVELOPMENT (2028)

Background Conditions

This section presents an analysis of the future transportation conditions including projections of 2028 future traffic forecasts without the proposed development, as well as capacity and queuing analyses under this condition.

Methodology/Assumptions. It was assumed that the proposed redevelopment would be constructed and fully occupied by 2028, as specified in the traffic scoping document. The 2028 future traffic forecasts without site redevelopment were developed based on a composite of existing baseline 2024 traffic volumes and regional traffic growth.

Pipeline Developments. As outlined in the scoping document, there are currently no pipeline developments identified near the site.

Regional Growth. An increase in traffic associated with regional growth from 2024 to 2028 was estimated at 0.5 percent per year, compounded annually, for all turning movements as agreed to with DES staff during scoping. This growth rate was applied to all turning movements, except for the movements in/out of the site driveways. This growth accounts for increases in traffic resulting from potential development and influences outside of the immediate study area. The regional growth at each of the study intersections is shown on Figure 5-1.

The resulting 2028 future traffic forecasts without development are shown on Figure 5-2.

Planned Improvements. There are currently no funded transportation improvements within the study area. It is noted new traffic signal infrastructure in planned at the Langston Boulevard / N. Kirkwood Road / Spout Run Parkway intersection. No changes to traffic signal timings or phasing are planned with the improvements.

Future Conditions without Development Operational Analysis (2028)

Future peak hour LOS and 50th and 95th percentile queues without the redevelopment of the Walgreens site in year 2028 were estimated at the study intersections based on the existing conditions, lane use and traffic controls shown on Figure 2-1; existing traffic signal phasing/timings obtained from Arlington County; the future peak hour traffic forecasts without redevelopment are shown on Figure 5-2; and the HCM 2000 methodologies using Synchro Software, version 11. The LOS and queue results are presented in Appendix F and summarized in Tables 5-1 and 5-2.

Levels of Service. As shown in Table 5-1, with increases in traffic due to regional growth, all signalized study intersections would continue to operate at overall LOS “C” or better during the AM and PM peak hours.

Additionally, all individual lane groups/movements would operate LOS “E” exception of the eastbound left movement at the intersection of N Kirkwood Road / Spout Run Parkway / Langston Boulevard during the PM peak hour, consistent with existing conditions.

The results indicate that slight increases in delay would occur throughout the network as a result of increased traffic due to regional growth vehicle trips.

All of the stop-controlled study intersections would continue to operate similar to existing conditions, with all movements operating at acceptable levels of service.

Queuing. As shown on Table 5-2, the results of the queueing analysis are similar to those described in under existing conditions. Some movements would experience greater queueing as a result of increased traffic from regional growth and pipeline developments. Storage bays noted under existing conditions would continue to exceed available capacity.

Table 5-1
3130 Langston Boulevard
Future Conditions without Development Intersection Level of Service Summary [1]

SECTION 6
PROPOSED SITE DESCRIPTION, TRIP GENERATION, DISTRIBUTIONS & ASSIGNMENTS

Proposed Site Redevelopment Description

The Applicant has filed a 4.1 Site Plan and rezoning application to redevelop the site with mixed-used development in accordance with the Langston Boulevard Plan. This redevelopment would include up to 276 multi-family residential dwelling units and space for ground floor retail and/or equivalent. The site will be served by a parking structure with a total of approximately 331 parking spaces.

Access to the site would be consolidated from two (2) to one (1) driveway along N. Kirkwood Road and provide access to the parking structure.

Site Trip Generation Analysis

The number of site generated vehicular and person trips anticipated to be generated by the redevelopment was estimated for proposed conditions based on ITE's Trip Generation Manual, 11th Edition Land Use Code (LUC) 222 (Multifamily Residential). General Urban / Suburban rates were utilized along with the Arlington County mode share assumptions that would suggest a 48% non-auto reduction for the residential use. No internal reduction was assumed for the residential use.

As shown on Table 6-1, the proposed development program (276 residential units) is anticipated to generate 42 AM peak hour trips (11 in and 31 out), and 49 PM peak hour trips (30 in and 19 out). Accordingly, comparing the existing and proposed programs, the proposed uses would generate 4 additional AM peak hour trips, and 55 fewer PM peak hour trips.

The number of person trips expected to be generated by the site also were estimated. As shown in Table 6-1, the site is expected to generate 87 AM peak hour person trips and 102 PM peak hour person trips. This includes 33 AM and 39 PM transit trips and 6 AM and 7 PM active trips.

Site Trip Distribution and Assignment

The total vehicular trips generated by the proposed development were assigned to the roadway network using the trip distributions developed from the traffic count data, existing observed intersection splits and directions of approaches, and engineering judgement.

The trips were assigned to the proposed site driveway on N. Kirkwood Road. These distributions were reaffirmed with County staff through the scoping process.

The directional distribution for new site generated trips is as follows:

To/From the East on Langston Boulevard:	20%
To/From the West on Langston Boulevard:	15%
To/From the North on Spout Run Parkway:	25%
To/From the South on N. Kirkwood Road:	20%
To/From the West on Interstate 66:	20%
Total:	100%

Refer to Figure 6-1 for the site trips assignments.

Existing Site Trips Removed

The existing site trips summarized previously in the MMTA were removed from the network based on existing traffic patterns and are shown in Figure 6-2.

SECTION 7
FUTURE CONDITIONS WITH DEVELOPMENT (2028)

This section presents an analysis of the future conditions including projections of 2028 future traffic forecasts with the proposed development, as well as capacity and queuing analyses.

Future Traffic Forecasts with Development (2028)

Future traffic forecasts with the site development were derived by adding the future traffic forecasts without development, shown on Figure 5-2, the site generated trips shown on Figure 6-1, and the existing site trips removed shown on Figure 6-2 to arrive at the future traffic forecasts with development shown on Figure 7-1.

Operational Analysis of Future Conditions with the Proposed Development

Future peak hour LOS and 50th and 95th percentile queues with the proposed development were estimated at the study intersections based on the future peak hour traffic forecasts with redevelopment shown on Figure 7-1; the existing traffic signal phasing/timings obtained from Arlington County; and the HCM 2000 methodologies using Synchro Software, Version 11. The results are presented in Appendix H and summarized in Table 7-1 and Table 7-2.

Levels of Service. The results with the proposed redevelopment indicate that all of the signalized study intersections would continue to operate at an overall LOS “C” or better during the AM and PM. These results are based on the current traffic signal timings provided by Arlington County DES. Additionally, all lane groups and turning movements will operate at similar levels of service to the future conditions without development. Based on a review of the traffic signal timings provided by DES staff indicated that adjustments to phasing could improve operations for certain lane groups operating at or near capacity.

Queuing. As shown on Table 7-2, the results of the queueing analysis are similar to those described in under existing conditions and future conditions without development. Increases in the estimated average and 95th percentile queues when compared to future conditions would not significantly affect the overall performance of the study intersections.

SECTION 8
TRANSPORTATION MANAGEMENT PLAN

A Transportation Management Plan (TMP) will be required to ensure users of the site are familiar with and use the multimodal transportation options available to them. The project site's location makes it a prime location for multimodal commuting given its excellent transit, pedestrian, and bicycle facilities discussed herein.

The elements of the TMP as described herein will be customized to meet the needs of this site given its location and surrounding multimodal environment. The goal of the TMP is to ultimately reduce the reliance on single occupancy vehicle trips and encourage alternative modes of transportation. The TMP will be developed and implemented to meet the needs of the proposed development and support the objectives of the Arlington County TDM program. The implementation of a TMP will influence the travel behavior of residents, visitors, employees, and users of the site by reducing peak hour vehicle-trips, parking demand, promote use of alternative transportation modes and maximize the use of the multimodal transportation facilities available.

At the time of Final Site Plan for the site, the Developer agrees to obtain the approval of the County Manager or his designee for such plan prior to the issuance of the First Certificate of Occupancy (CO) for the building. Upon approval of the TMP by the County Manager, the Developer agrees to implement all elements of the plan with assistance, when appropriate, by agencies of the County. The Developer agrees that all individual elements of the TMP will be operational prior to issuance of the First Partial Certificate of Occupancy for Tenant Occupancy. All dollar denominated rate will be adjusted for inflation by the U.S. Department of Labor, Bureau of Labor Statistics Consumer Price Index (CPI) Inflation Calculator from the date of site plan approval by the County Board.

The TMP will include a schedule and details of implementation, and continued operation of the elements in the plan. The location of the site and its proximity to public transportation allow for a TMP that may include, but not be limited to, the following strategies.

Participation and Funding

1. Establish and maintain an active, ongoing relationship with Arlington Transportation Partners (ATP), or successor entity, at no cost to the developer, on behalf of the property owner.

2. Designate and keep current a member of building management as Property Transportation Coordinator (PTC) to be primary point of contact with the County and undertake the responsibility for coordinating and completing all Transportation Management Plan (TMP) obligations, as directed by applicable adopted Site Plan Conditions. The PTC shall be trained, to the satisfaction of Arlington County Commuter Services (ACCS), to provide transit, bicycle, walk, rideshare and other

information provided by Arlington County intended to assist with transportation to and from the site.

3. Contribute annually to ACCS, or successor, to sustain direct and indirect on-site and off-site services in support of TMP activities. Payment on this commitment shall begin as a condition of issuance of the First Partial Certificate of Occupancy for Tenant Occupancy for each respective building or phase of construction, or as directed by applicable adopted Site Plan Conditions. Subsequent payments shall be made annually.

Facilities and Improvements

1. Provide in the lobby or lobbies, a transportation information display(s), the number, content, design, and location of will be approved by ACCS. The developer agrees that the required transportation information displays will meet the Arlington County Neighborhood Transportation Information Display Standards in effect on the date of the site plan approval, or equivalent as approved by the County Manager.

2. Comply with requirements of Site Plan conditions to provide bicycle parking/storage facilities, a Parking Management Plan (PMP), and a Bicycle Facilities Management Plan, if required.

3. Bus stops, shelters, and/or bikeshare stations on the sidewalk within 50 feet of the site will be maintained free of snow, ice, trash, and debris. A minimum six (6) foot wide path, clear of snow and ice, to the main entrance of the building will be maintained for bus stops and bikeshare stations.

Promotions, Services, Policies

1. Prepare, reproduce and distribute, in digital or hard copy, materials provided by Arlington County, which includes site-specific transit, bicycle, walk, and rideshare related information, to each new office, retail, property management, or maintenance employee, from initial occupancy through the life of the site plan. These materials shall be distributed as a part of prospective tenant marketing materials, as well as communications associated with lease signing, on-boarding, or similar activities.

2. Provide one time, per person, to each new office, retail, property management, or maintenance employee, whether employed part-time or full-time, directly employed or contracted, who begins employment in the building throughout initial occupancy, the choice of one of the following:

    - Metro fare on a SmarTrip card or successor fare medium
    - A one-year bikeshare membership
    - A one-year carshare membership

3. The County Manager may approve additions to, or substitution of one or more of these choices with a comparable transportation program incentive, as technology and service options change, if he/she finds that an incentive shall be designed to provide the individual with an option other than driving alone in a personal vehicle, either by removing a barrier to program entry, such as a membership cost, or by providing a similar level of subsidized access to a public or shared transportation system, program or service.

4. Provide, administer, or cause the provision of a sustainable commute benefit program for each on-site property management, maintenance and hotel employee. This commute benefit program shall offer, at a minimum, a monthly pre-tax transit benefit or a monthly subsidized/direct transit benefit.

5. Provide, under a "transportation information" heading on the Developer and property manager's websites regarding this development:

    - Links to the most appropriate Arlington County Commuter Services and/or external transportation-related web page(s). Confirmation of most appropriate link will be obtained from ACCS.
    - A description of key transportation benefits and services provided at the building, pursuant to the TMP.

Performance and Monitoring

1. During the first year of start-up of the TMP and on an annual basis thereafter, the Developer shall submit an annual report, which may be of an online, or e-mail variety, to the County Manager, describing completely and correctly, the TDM related activities of the site and changes in commercial tenants during each year.

2. The Developer agrees to conduct and/or participate in, a transportation and parking performance monitoring study at two (2) years, five (5) years, and each subsequent five (5) years (at the County's option), after issuance of the First Partial Certificate of Occupancy for Tenant Occupancy. The County may conduct the study or ask the owner to conduct the study (in the latter case, no reimbursement payment shall be required). As part of the study, a report shall be produced as specified by the County. The study may include, building occupancy rates, average vehicle occupancy, average garage occupancy for various days of the week and times of day, parking availability by time of day, average duration of stay for short term parkers for various days of the week and times of day, pedestrian traffic, a seven-day count of site-generated vehicles traffic, and/or a voluntary mode-split survey.

The building owner and/or operator shall notify, assist, and encourage building occupants and visitors on site to participate in mode-split surveys which may be of an on-line or email variety.

SECTION 9
CONCLUSIONS AND RECOMMENDATIONS

The conclusions and recommendations of this study are as follows:

1. The site is well-served by a multimodal transportation system that includes interstate, arterial, collector, and local streets; a connected network of sidewalks with ramps and pedestrian countdown heads; bicycle facilities; and numerous bus lines providing easy access to the nearby Metrorail stations, and other points of interests.

2. The three (3) signalized study intersections currently operate at overall acceptable LOS “C” or better during the AM and PM peak hours. Some individual movements or approaches operate at or near capacity.

3. In the future without and with redevelopment, the three (3) signalized study intersections would experience minor increases in delay as a result of nearby development and regional growth but would continue to operate generally consistent to existing conditions.

4. Upon completion, the proposed development is expected to generate 42 AM peak hour trips (11 in and 31 out), and 49 PM peak hour trips (30 in and 19 out). It would generate 4 more AM peak hour trips and 55 fewer PM peak hour trips when compared to the existing office and retail uses. The site is expected to generate 87 AM peak hour person trips and 102 PM peak hour person trips. This includes 33 AM and 39 PM transit trips and 6 AM and 7 PM active trips.

5. The proposal will be redeveloped in accordance with the Langston Boulevard Plan and will include multimodal improvements to both Langston Boulevard and N. Kirkwood Road. These improvements will include a new separated bike lane along Langston Boulevard as recommended in the Master Transportation Plan and Langston Boulevard Plan.

6. The proposal will consolidate site access to a single driveway on N. Kirkwood Road and will include the closure of Langston Boulevard driveway which will allow for an improved multimodal environment along the site’s frontage.

7. The proposal will meet the bicycle and vehicular parking requirements.

8. The implementation of a Transportation Management Plan (TMP) will encourage the use of other non-auto modes of transportation including walking, bicycling and public transit as alternative to single occupancy vehicles and minimize the project’s vehicular traffic impacts.

3130 LANGSTON BOULEVARD

Multimodal Transportation Assessment

Technical Appendix

August 9, 2024

Appendix A

Scoping Agreement

SCOPE OF WORK MEETING FORM
3130 Langston Boulevard
Multimodal Transportation Assessment Base Assumptions

Contact Information	
Consultant Name: Tele: E-mail:	Mike Pinkoske, PTP 703.761.2790 pinkoske@vika.com
Developer/Owner Name: Tele: E-mail:	Rooney Properties, LLC Cassie Guy 571.297.4904 CGuy@RooneyPropertiesLLC.com

Project Information	
Project Name:	3130 Langston Boulevard
Project Location: The site location is shown on **Attachment 1**.	The Property is located in the southeast quadrant of the Langston Boulevard / Interstate 66 Eastbound off ramp and just west of the Langston Boulevard / N. Kirkwood Road intersection. Currently, the site is improved with a single-story brick Walgreen pharmacy with drive-through and associated surface parking. Access to the site is provided via one curb cut on Langston Boulevard and two curb cuts on N. Kirkwood Road. The Property consists of approximately 73,251 square feet or 1.68 acres of land area. The Property is identified as Arlington County RPC No. 15-012-041 and is currently located within an existing C-2 Zoning District.
Project Description: See **Attachment 2** for a copy of the concept plan.	As proposed, the site would be rezoned with a General Land Use Plan (GLUP) amendment and redeveloped in accordance with the Langston Boulevard Plan. The existing building and surface parking would be razed and redeveloped with a mixed-use multifamily residential building with approximately 276 units and space for ground floor retail and/or equivalent (2,256 SF). To minimize traffic impacts along Langston Boulevard the existing driveway would be closed and the two driveways on N. Kirkwood Road would be consolidated. The site would be served by two loading/trash berths and approximately 340 parking spaces. Streetscape improvements consistent with the Langston Boulevard Plan and Master Transportation Plan would be constructed along Langston Boulevard and N. Kirkwood Road. Modifications to the existing median on N. Kirkwood

</table>

ADDITIONAL NOTES:

- See Arlington County MMTA Scoping Addendum (attached) for **Compact MMTAs** that includes additional multimodal requirements/details to be included in the MMTA that are not specifically outlined herein.
- This 4.1.2 Site Plan proposal does ***not*** trigger VDOT 870 trip thresholds of 5,000 total daily trips.
- The study will include a discussion regarding the directions of approach for the site trips.
- Weekday peak hour counts will be conducted from 7am to 10am and from 4pm to 7pm.
- Field measured PHF's will be used if between 0.85 and higher, if lower, a 0.85 PHF will be used. For future conditions a PHF of 0.92 or higher will be used.
- Level of service calculations for existing and future conditions without and with development shall be in accordance with the Highway Capacity Manual (HCM) 2010 methodologies, as computed by Synchro 11 software. Typical Synchro parameters to be utilized in this analysis will be consistent with VDOT's TOSAM and Arlington County standards.
- Study will include a comprehensive discussion of the multimodal transportation options available in the vicinity of the site including Metrorail, bus, capital bikeshare, bikes, and pedestrians consistent with the Arlington County MMTA Scoping Addendum (attached) for **Compact MMTAs**.
- Study will include a comprehensive discussion of the safety analysis of the site, including crash data and summary tables consistent with the Arlington **County MMTA** Scoping Addendum (attached) for compact MMTAs.
- Include discussion and calculation of person trips generated by the proposal broken out into the various mode shares based on census data.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2018-2022 American Community Survey 5-Year Estimates
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Workers include members of the Armed Forces and civilians who were at work last week.
	Several means of transportation to work categories were updated in 2019. For more information, see: Change to Means of Transportation.
	The 2018-2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
COLUMN NOTES	None

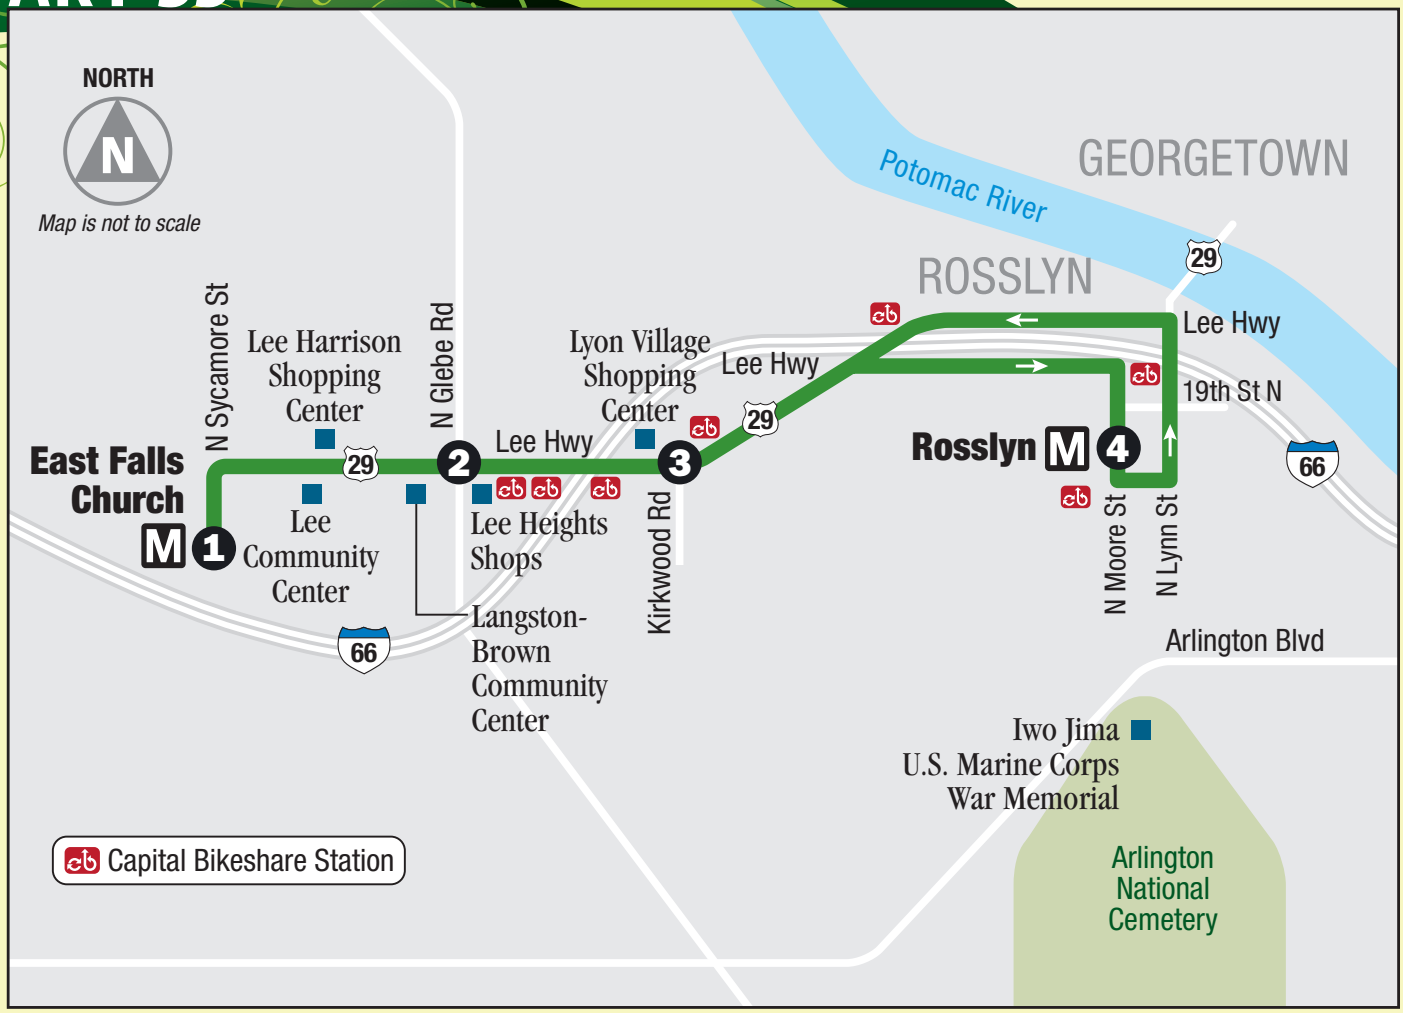
ART 55

ARLINGTON VIRGINIA | DEPARTMENT OF ENVIRONMENTAL SERVICES

ART arlington transit

Effective August, 2020



ART 55 FARES	Cash Fare	Fare w/ SmarTrip Card	Transfers Using SmarTrip Card*	
			ART to Metrorail or Metrorail to ART	ART to ART or ART to/from Metrobus
Adults	$2.00	$2.00	50¢ discount	Free
Senior Citizens (ages 65+)	$1.00	$1.00	50¢ discount	Free
People w/Disabilities (w/WMATA ID or Medicare card)	$1.00	$1.00	50¢ discount	Free
K-12 Students (w/school ID)	$1.00	K-12 students receive the $1.00 student fare only when paying with cash, a green iRide token or a Student iRide SmarTrip card. Transfer costs between ART and other transit systems may vary for using the Student iRide SmarTrip card.		

*TRANSFERS MUST BE MADE WITHIN 2 HOURS.

Regular Fares can also be paid with a 7 Day Regional Bus Pass (loaded on SmarTrip), a gold ART token, or a green iRide token. You can buy tokens or purchase SmarTrip cards and add value or a 7 day pass to them at any Commuter Store or Mobile Commuter Store, or online at commuterdirect.com.

TARIFAS ART 55	Tarifa Regular	Tarifa con SmarTrip	Transbordos usando tarjeta SmarTrip*	
			ART a Metrorail o Metrorail a ART	ART a ART o ART a/desde Metrobus
Adultos	$2.00	$2.00	50¢ de descuento	gratis
Adultos mayores (65 años a más)	$1.00	$1.00	50¢ de descuento	gratis
Personas con discapacidad (con identificación WMATA o tarjeta Medicare)	$1.00	$1.00	50¢ de descuento	gratis
Estudiantes jardín a 12 grado (con ID estudiante)	$1.00	Estudiantes desde jardín infante hasta 12 grado pagan tarifa de estudiante de $1 en ART cuando pagan en efectivo, con tarjeta iRide SmarTrip color verde o iRide token color verde. Costo de transbordos entre ART y otros servicios de transporte pueden variar con tarjeta iRide SmarTrip.		

*TRANSBORDOS DEBEN HACERSE DENTRO DE DOS HORAS.

Las tarifas regulares también se pueden pagar con un Pase de Bus Regional de 7 Días (cargado en SmarTrip), un token dorado ART o un token verde iRide. Puede comprar pases o tarjetas SmarTrip y cargarles dinero o un pase de 7 días en cualquier tienda Commuter Store o Mobile Commuter Store, o en Internet en commuterdirect.com (en inglés).

Números sombreados en negrita son **horas PM**

How to use this timetable

- Use the map to find the stops closest to where you will get on and off the bus.
- Select the schedule (Weekday, Saturday, Sunday) for when you will travel. Along the top of the schedule, find the stop at or nearest the point where you will get on the bus. Follow that column down to the time you want to leave.
- Use the same method to find the times the bus is scheduled to arrive at the stop where you will get off the bus.
- If the bus stop is not listed, use the time shown for the bus stop before it as the time to wait at the stop.
- The end-of-the-line or last stop is listed in ALL CAPS on the schedule.

Cómo Usar este Horario

- Use este mapa para localizar las paradas más cercanas a donde se subirá y bajará del autobús.
- Seleccione el horario (Entre semana, sábado, domingo) de cuando viajará. A lo largo de la parte superior del horario, localice la parada o el punto más cercano a la parada en la que se subirá al autobús. Siga esa columna hacia abajo hasta la hora en la que desee salir.
- Utilice el mismo método para localizar las horas en que el autobús está programado para llegar a la parada en donde desea bajarse del autobús.
- Si la parada del autobús no está listada use la hora que se muestra en la parada anterior como la hora de espera en la parada.
- El final de la ruta o la última parada del autobús aparece en letras MAYÚSCULAS en el horario.

LOS Descriptions

Level of Service for Signalized Intersections

Level of service for signalized intersections is defined in terms of delay, which is a measure of driver discomfort and frustration, fuel consumption, and lost travel time. Specifically, level-of-service (LOS) criteria are stated in terms of the average stopped delay per vehicle for a 15-min analysis period. The criteria are given in Exhibit 16-2. Delay may be measured in the field or estimated using procedures presented later in this chapter. Delay is a complex measure and is dependent on a number of variables, including the quality of progression, the cycle length, the green ratio, and the *v/c* ratio for the lane group in question.

LOS A describes operations with very low delay, up to 10 sec per vehicle. This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

LOS B describes operations with delay greater than 10 and up to 20 sec per vehicle. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of average delay.

Exhibit 16-2. Level-of-Service Criteria for Signalized Intersections

LEVEL OF SERVICE	STOPPED DELAY PER VEHICLE (SEC)
A	$\leq$10.0
B	> 10.0 and $\leq$20.0
C	> 20.0 and $\leq$ 35.0
D	> 35.0 and $\leq$ 55.0
E	> 55.0 and $\leq$ 80.0
F	>80.0

LOS C describes operations with delay greater than 20 and up to 35 sec per vehicle. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.

LOS D describes operations with delay greater than 35 and up to 55 sec per vehicle. At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.

LOS E describes operations with delay greater than 55 and up to 80 sec per vehicle. This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high *v/c* ratios. Individual cycle failures are frequent occurrences.

LOS F describes operations with delay in excess of 80 sec per vehicle. This level, considered to be unacceptable to most drivers, often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high *v/c* ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing causes to such delay levels.

Source: Highway Capacity Manual, 2000. Transportation Research Board, National Research Council

Level of Service Criteria for Stop Sign Controlled Intersections

The level of service criteria are given in Table 17-2. As used here, control delay is defined as the total elapsed time from the time a vehicle stops at the end of the queue until the vehicle departs from the stop line; this time includes the time required for the vehicle to travel from the last-in-queue position to the first-in-queue position, including deceleration of vehicles from free-flow speed to the speed of vehicles in queue.

The average total delay for any particular minor movement is a function of the service rate or capacity of the approach and the degree of saturation. . . .

Table 17-2. Level of Service Criteria for TWSC Intersections

LEVEL OF SERVICE	AVERAGE CONTROL DELAY (sec/veh)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

Average total delay less than 10 sec/veh is defined as Level of Service (LOS) A. Follow-up times of less than 5 sec have been measured when there is no conflicting traffic for a minor street movement, so control delays of less than 10 sec/veh are appropriate for low flow conditions. To remain consistent with the AWSC intersection analysis procedure described later in this chapter, a total delay of 50 sec/veh is assumed as the break point between LOS E and F.

The proposed level of service criteria for TWSC intersections are somewhat different from the criteria used in Chapter 16 for signalized intersections. The primary reason for this difference is that drivers expect different levels of performance from different kinds of transportation facilities. The expectation is that a signalized intersection is designed to carry higher traffic volumes than an unsignalized intersection. Additionally, several driver behavior considerations combine to make delays at signalized intersections less onerous than at unsignalized intersections. For example, drivers at signalized intersections are able to relax during the red interval, where drivers on the minor approaches to unsignalized intersections must remain attentive to the task of identifying acceptable gaps and vehicle conflicts. Also, there is often much more variability in the amount of delay experienced by individual drivers at unsignalized than signalized intersections. For these reasons, it is considered that the total delay threshold for any given level of service is less for an unsignalized intersection than for a signalized intersection. . . .

LOS F exists when there are insufficient gaps of suitable size to allow a side street demand to cross safely through a major street traffic stream. This level of service is generally evident from extremely long total delays experienced by side street traffic and by queueing on the minor approaches. The method, however, is based on a constant critical gap size - that is, the critical gap remains constant, no matter how long the side street motorist waits. LOS F may also appear in the form of side street vehicles' selecting smaller-than-usual gaps. In such cases, safety may be a problem and some disruption to the major traffic stream may result. It is important to note that LOS F may not always result in long queues but may result in adjustments to normal gap acceptance behavior. The latter is more difficult to observe on the field than queueing, which is more obvious.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
